

PRODUCTION PERFORMANCE & QUALITY REPORT

Facility: Main Manufacturing Plant Reporting Period: Weekly Summary

Executive Summary:

The manufacturing database contains production machine records across multiple tables without active work order, OEE, weighing, or scrap data. A total of 28 machines are cataloged in the primary equipment table alongside 10 additional entries in secondary records. Analysis of the provided dataset focuses exclusively on machine listings and capacities.

1. Weekly Production Trends

[Chart Missing]

Production Analysis:

No work order records or production output quantities are present in the provided database tables. The dataset contains equipment inventories including CNC Lathes, CNC Mills, Welders, Assembly Stations, and Paint Booths. Production tracking metrics such as planned and completed quantities cannot be evaluated from this data.

Day	Target	Actual	Status
-----	--------	--------	--------

2. Machine Performance (OEE Breakdown)

OEE Overview:

CapacityAnalysis utilization data is entirely absent from the provided database tables. As a result, machine OEE performance and utilization percentages cannot be calculated or reported.

[Chart Missing]

Line	OEE Score	Status
------	-----------	--------

3. Rejection vs. Production Volume by Shift

[Chart Missing]

Shift Efficiency Analysis:

WeighingMachine shift data, including output volumes, rejections, and defect rates, is not present in the dataset. Shift-wise performance analysis is unavailable.

Shift	Output	Rejections	Defect Rate
-------	--------	------------	-------------

4. Scrap Analysis & Waste Distribution

Key Scrap Drivers:

Scrap record tables and associated cause percentages are missing from the provided data sources. Scrap distribution cannot be determined. [Chart Missing]

5. Corrective Action Plan

Action Item	Target Area	Owner	Deadline
Populate work order, OEE, weighing machine, and scrap tables in the database to enable production reporting.	Manufacturing Database	IT / Data Engineering	2023-12-31
