

PRODUCTION PERFORMANCE & QUALITY REPORT

Facility: Main Manufacturing Plant Reporting Period: Weekly Summary

Executive Summary:

The manufacturing facility processed a total of 2 work orders comprising 1,500.0 planned units, with 1,000.0 units completed and 500.0 units remaining in planned status. Capacity analysis indicates machine utilization ranging from 75.0% on CNC Lathe #2 to 103.33% on Assembly Station #1. Scrap collection data shows a cumulative scrap quantity across materials led by HDPE Container 5L with 30.0 units. Rejections were recorded across 7 material categories, with HDPE Cap 28mm experiencing the highest rejection volume of 100.0 units due to flash defects.

1. Weekly Production Trends

Production Analysis:

The production performance data consists of 2 distinct work orders tracked in the system. One work order has been successfully completed with a planned and completed quantity of 1,000.0 units. The second work order remains in planned status with 500.0 planned units and 0.0 completed units.

Day	Target	Actual	Status
Completed WO	1000.0	1000.0	On Track
Planned WO	500.0	0.0	Below Target

2. Machine Performance (OEE Breakdown)

OEE Overview:

Machine utilization analysis across 5 workstations shows varied performance levels. Assembly Station #1, CNC Lathe #1, and CNC Mill #1 achieved optimal utilization rates exceeding 85%, while Auto Assembly Line and CNC Lathe #2 operated below optimal thresholds at 80.0% and 75.0% respectively.

Line	OEE Score	Status
Assembly Station #1	103.33%	Optimal
Auto Assembly Line	80.0%	Below Target
CNC Lathe #1	88.33%	Optimal
CNC Lathe #2	75.0%	Below Target
CNC Mill #1	97.5%	Optimal

3. Rejection vs. Production Volume by Shift

[Chart Missing]

Shift Efficiency Analysis:

Shift-wise production details from WeighingMachine data were not provided in the current dataset, indicating a gap in shift-level output and rejection tracking.

Shift	Output	Rejections	Defect Rate
-------	--------	------------	-------------

4. Scrap Analysis & Waste Distribution

Key Scrap Drivers:

Scrap analysis across 7 materials highlights HDPE Container 5L as the primary scrap driver with 30.0 units (26.3% of total scrap), closely followed by HDPE Drum 20L with 25.0 units (21.9%), and PET Bottle 500ml with 20.0 units (17.5%). Total scrap across all listed items is 113.0 units.

5. Corrective Action Plan

Action Item	Target Area	Owner	Deadline
Investigate flash defects causing high rejections on HDPE Cap 28mm	HDPE Cap 28mm	Quality Control	2023-11-15
Address low machine utilization on CNC Lathe #2 (75%) and Auto Assembly Line (80%)	CNC Lathe #2 / Auto Assembly	Production Management	2023-11-20
Review extrusion and molding parameters for HDPE Container 5L to reduce scrap quantity	HDPE Container 5L	Plant Maintenance	2023-11-18
