

PRODUCTION PERFORMANCE & QUALITY REPORT

Facility: Main Manufacturing Plant Reporting Period: Weekly Summary

Executive Summary:

The current production run includes two primary work orders, WO202608030001 and WO202608030002, with a combined planned output of 1500 units. Work order WO202608030002 is fully completed at 1000 units, while WO202608030001 remains planned with 0 completed units. Machine utilization across Assembly Station #1 and CNC Lathe #1 ranges from 60.0% to 120.0% across recorded capacity dates.

1. Weekly Production Trends

Production Analysis:

Work order analysis shows a distinct split in production status. WO202608030001 (Assembly Station #1) has a planned quantity of 500.0 with 0.0 completed, categorizing its status as Planned and Below Target. Conversely, WO202608030002 (CNC Lathe #1) has successfully achieved its target of 1000.0 completed units against a planned quantity of 1000.0, resulting in a Completed status.

Day	Target	Actual	Status
WO202608030001	500	0	Below Target
WO202608030002	1000	1000	On Track

2. Machine Performance (OEE Breakdown)

OEE Overview:

Machine utilization data from capacity analysis indicates variable performance across the monitored dates. Assembly Station #1 reached utilization peaks of 110.0% and 120.0%, with a dip to 80.0%. CNC Lathe #1 demonstrated utilization levels between 60.0% and 115.0%, highlighting fluctuating operational capacity.

Line	OEE Score	Status
Assembly Station #1	110.0%	Optimal
Assembly Station #1	80.0%	Below Target
Assembly Station #1	120.0%	Optimal
CNC Lathe #1	115.0%	Optimal
CNC Lathe #1	90.0%	Optimal
CNC Lathe #1	60.0%	Below Target

3. Rejection vs. Production Volume by Shift

[Chart Missing]

Shift Efficiency Analysis:

Shift-wise production metrics from WeighingMachine data are currently unavailable in the provided dataset. Production tracking is primarily managed through work order planned and completed quantities.

Shift	Output	Rejections	Defect Rate
-------	--------	------------	-------------

4. Scrap Analysis & Waste Distribution

Key Scrap Drivers:

Scrap drivers and material analysis data are not present in the current database records. Further data logging is required to evaluate scrap distribution and rejection reasons.

[Chart Missing]

5. Corrective Action Plan

Action Item	Target Area	Owner	Deadline
Investigate production delay and schedule execution for planned work order	Assembly Station #1	Production Management	2026-07-01
Address operational bottlenecks causing capacity drops during low-utilization cycles	CNC Lathe #1	Maintenance	2026-07-05
