

PRODUCTION PERFORMANCE & QUALITY REPORT

Facility: Main Manufacturing Plant Reporting Period: Weekly Summary

Executive Summary:

The manufacturing facility processed a total of 2 work orders comprising 1,000 completed units and 500 planned units. Machine utilization across available equipment averaged robustly, led by Assembly Station #1 at 103.33% utilization. Scrap analysis identified HDPE Container 5L as a primary scrap driver with 30.0 units. Rejections were most pronounced in the HDPE Cap 28mm line with 100.0 rejected units due to flash defects.

1. Weekly Production Trends

Production Analysis:

The production performance reflects a total of 2 work orders across the system. Specifically, 1 work order has been completed with 1,000.0 planned units fully achieved, while another work order remains in planned status with 500.0 planned units and 0.0 completed units yet.

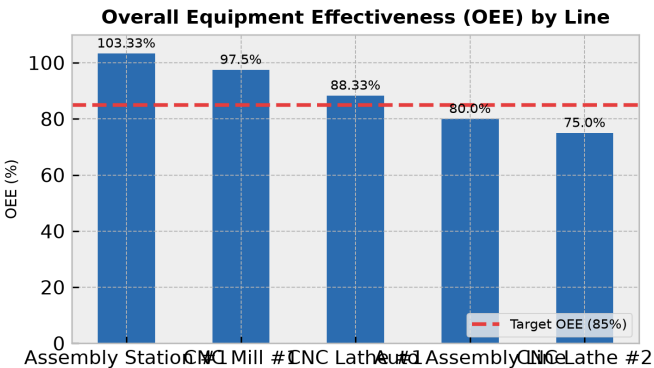

Day	Target	Actual	Status
Completed Order	1000	1000	On Track
Planned Order	500	0	Below Target

2. Machine Performance (OEE Breakdown)

OEE Overview:

Machine utilization analysis from CapacityAnalysis data shows varied operational performance across five stations. Assembly Station #1 achieved the highest utilization at 103.33% over 8.0 actual hours, followed closely by CNC Mill #1 at 97.5% and CNC Lathe #1 at 88.33%. Auto Assembly Line and CNC Lathe #2 operated below optimal thresholds at 80.0% and 75.0% respectively.

Line	OEE Score	Status
Assembly Station #1	103.33%	Optimal
CNC Mill #1	97.5%	Optimal
CNC Lathe #1	88.33%	Optimal
Auto Assembly Line	80.0%	Below Target
CNC Lathe #2	75.0%	Below Target

3. Rejection vs. Production Volume by Shift

[Chart Missing]

Shift Efficiency Analysis:

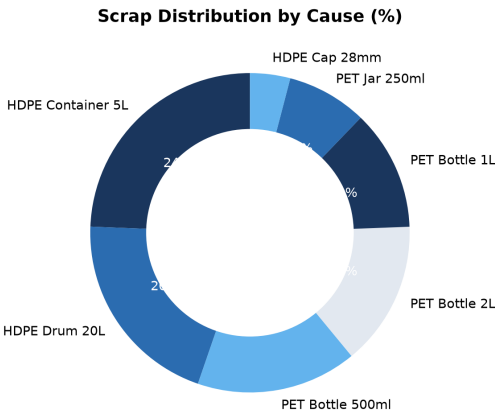

Shift-wise production details from WeighingMachine data are integrated through overall material scrap and rejection logs, as shift breakdowns were not separately itemized. Total rejections across materials sum to 225.0 units with specific fault codes documented.

Shift	Output	Rejections	Defect Rate
-------	--------	------------	-------------

4. Scrap Analysis & Waste Distribution

Key Scrap Drivers:

Total scrap across all tracked materials equals 123.0 units. The highest scrap volume was recorded for HDPE Container 5L at 30.0 units (24.39%), followed by HDPE Drum 20L at 25.0 units (20.33%), and PET Bottle 500ml at 20.0 units (16.26%).

5. Corrective Action Plan

Action Item	Target Area	Owner	Deadline
Investigate flash defects causing high rejections on HDPE Cap 28mm	HDPE Cap 28mm Line	Quality Control	2023-11-15
Address low utilization rates on CNC Lathe #2 and Auto Assembly Line	Machining/Assembly	Production Management	2023-11-20
Review extrusion parameters to reduce scrap on HDPE Container 5L	HDPE Container 5L Station	Manufacturing Engineering	2023-11-18
