

PRODUCTION PERFORMANCE & QUALITY REPORT

Facility: Main Manufacturing Plant Reporting Period: Weekly Summary

Executive Summary:

The manufacturing facility processed a total of 2 work orders comprising 1500.0 planned units, with 1000.0 units successfully completed. Machine utilization across active lines peaked at 103.33% for Machine 6, while average utilization ranged down to 75.0% for Machine 2. Shift-wise performance recorded a total of 9250.0 finished goods across Shift A, Shift B, and Shift C, alongside 225.0 total rejected quantities. Scrap analysis identified HDPE Container 5L as a primary driver with 30.0 units of scrap.

1. Weekly Production Trends

Production Analysis:

Work order performance shows 1 completed order with a planned and completed quantity of 1000.0 units, achieving on-track status. An additional work order remains in planned status with 500.0 planned units and 0.0 completed units.

Day	Target	Actual	Status
Completed Work Order	1000	1000	On Track
Planned Work Order	500	0	Below Target

2. Machine Performance (OEE Breakdown)

OEE Overview:

Capacity analysis indicates strong machine performance overall, with Machine 3 and Machine 6 exceeding optimal thresholds at 97.5% and 103.33% respectively. Machine 1 operates at 88.33% (Optimal), while Machine 2 (75.0%) and Machine 8 (80.0%) fall below the optimal 85% threshold.

Line	OEE Score	Status
Machine 1	88.3%	Optimal
Machine 2	75.0%	Below Target
Machine 3	97.5%	Optimal
Machine 6	103.3%	Optimal
Machine 8	80.0%	Below Target

3. Rejection vs. Production Volume by Shift

Shift Efficiency Analysis:

Shift A drove the majority of production with 7800.0 finished goods, 165.0 rejections, and a defect rate of 2.1%. Shift C produced 1450.0 finished goods with 25.0 rejections (1.7% defect rate), whereas Shift B recorded 0.0 finished goods and 35.0 rejections.

Shift	Output	Rejections	Defect Rate
Shift A	7800	165	2.1%
Shift B	0	35	100.0%
Shift C	1450	25	1.7%

4. Scrap Analysis & Waste Distribution

Key Scrap Drivers:

Scrap distribution is led by HDPE Container 5L representing 25.9% of the total 113.0 scrap units. Other notable contributors include HDPE Drum 20L at 21.6% and PET Bottle 500ml at 17.7%.

5. Corrective Action Plan

Action Item	Target Area	Owner	Deadline
Investigate low utilization and address downtime root causes	Machine 2	Maintenance	2023-11-15
Review tooling and parameters to resolve flash defects	HDPE Cap 28mm	Quality Control	2023-11-10
Audit Shift B operational bottlenecks and zero output	Shift B	Production Management	2023-11-12
