

PRODUCTION PERFORMANCE & QUALITY REPORT

Facility: Main Manufacturing Plant Reporting Period: Weekly Summary

Executive Summary:

The manufacturing production report encompasses a total of 2 work orders with 1 completed work order achieving a planned quantity of 1,000.0 and completed quantity of 1,000.0, alongside 1 planned work order with 500.0 planned quantity. Across shift operations, Shift A generated 7,800.0 finished goods with 165.0 rejected quantities, while Shift B and Shift C contributed varying output volumes. Machine utilization analyzed across multiple units showed Machine 3 and Machine 6 performing at high levels above 95%, while total scrap is led by materials such as HDPE Container 5L and HDPE Drum 20L.

1. Weekly Production Trends

Production Analysis:

An analysis of work order records shows a total of 2 work orders tracked in the system. The completed work order successfully met its target with 1,000.0 planned and 1,000.0 completed units. The remaining work order is currently in planned status with a target quantity of 500.0 and 0.0 completed units.

Day	Target	Actual	Status
Completed WO	1000	1000	On Track
Planned WO	500	0	Below Target

2. Machine Performance (OEE Breakdown)

OEE Overview:

Machine utilization data indicates strong performance across several units. Machine 3 achieved 97.5% and Machine 6 reached 103.33%, both designated as optimal. Machine 1 recorded 88.33% (Optimal), while Machine 2 (75.0%) and Machine 8 (80.0%) operated below the optimal threshold.

Line	OEE Score	Status
Machine 1	88.33%	Optimal
Machine 2	75.0%	Below Target
Machine 3	97.5%	Optimal
Machine 6	103.33%	Optimal
Machine 8	80.0%	Below Target

3. Rejection vs. Production Volume by Shift

Shift Efficiency Analysis:

Shift-wise production indicates that Shift A is the primary output driver with 7,800.0 finished goods, 165.0 rejections, and a defect rate of 2.1%. Shift B recorded 0.0 finished goods, 35.0 rejections, and 25.0 scrap quantity. Shift C produced 1,450.0 finished goods with 25.0 rejections and a defect rate of 1.7%.

Shift	Output	Rejections	Defect Rate
Shift A	7800	165	2.1%
Shift B	0	35	100.0%
Shift C	1450	25	1.7%

4. Scrap Analysis & Waste Distribution

Key Scrap Drivers:

Scrap distribution across materials highlights HDPE Container 5L as the highest contributor at 25.21% of total scrap, followed by HDPE Drum 20L at 21.01% and PET Bottle 500ml at 16.81%. Other materials including PET Bottle 2L, PET Bottle 1L, PET Jar 250ml, and HDPE Cap 28mm make up the remaining scrap quantities.

5. Corrective Action Plan

Action Item	Target Area	Owner	Deadline
Investigate root cause for flash defects contributing to high rejection volume	Molding Line	Quality Control	2023-11-15
Perform maintenance check on Machine 2 and Machine 8 to improve utilization above 85%	Machine 2 & 8	Maintenance	2023-11-20
Address neck defects and weight variance issues in container production	Production Line	Production	2023-11-18
