

Manufacturing & Video-Analytics Intelligent Report

“Generate a comprehensive Manufacturing Production Performance Report. Include: 1. Work Order summary with status and planned vs completed quantities 2. Machine utilization from CapacityAnalysis with UtilizationPercent per machine 3. Shift-wise production from WeighingMachine - FGQuantity, RejectedQuantity, ScrapQuantity 4. Scrap analysis by material from Scrap table 5. Rejection analysis with reasons from Rejected table”

Executive Summary

Matched keywords: capacity, machine, material, production, reject, shift, status, util, utilization, work_order, worker, workorder

Telemetry window: 2026-09-29T09:19:43Z → 2026-09-30T09:19:43Z (bucketed every 5m)

Work Order Summary

The Work Order database contains records indicating two distinct statuses. There is one completed work order with a planned quantity of 1,000 units, and one planned work order with a quantity of 500 units. This indicates a total planned volume of 1,500 units, of which 66.7% has been completed. No actual completed quantities or execution logs were found in the main WorkOrder table, though a single log entry exists in the WorkOrderLog table for WorkOrderId 139.

Data preview — WorkOrder (showing 2 of 2 points/rows)

Status	avg_PlannedQty	record_count
Completed	1000.000000	1
Planned	500.000000	1

Machine Capacity & Utilization Analysis

The CapacityAnalysis table contains records for five machines (IDs 1, 2, 3, 6, and 8) mapped to their respective Capacity IDs, but the requested 'UtilizationPercent' field is missing from the retrieved schema. To supplement this, the MachineMaster table shows an average capacity of 58.35 units per hour across 25 machines, while the Machine table lists capacities ranging from 120 to 250 units. The absence of actual utilization percentages represents a data collection or schema mapping gap that prevents a true efficiency analysis.

Data preview — CapacityAnalysis (showing 5 of 5 points/rows)

Machineld	avg_CapacityId	record_count
6	23	3
8	20	1
1	20	3
3	20	2
2	19	2

Shift-Wise Production (WeighingMachine) - Data Gap

The WeighingMachine table, which was expected to provide shift-wise production metrics including finished goods (FG) quantity, rejected quantity, and scrap quantity, is entirely missing from the retrieved databases. This represents a critical data collection gap. Without this table, we cannot evaluate shift performance, hourly throughput, or overall equipment effectiveness (OEE) metrics. This integration gap should be investigated immediately.

Scrap Analysis by Material - Data Gap

The Scrap table requested for material-wise scrap analysis is not present in the retrieved databases. While the MachineMaterialMapping table confirms that raw materials (such as MAT004, MAT019, and MAT020) are mapped to machines, there is no physical tracking of scrap weights or material loss in the current dataset. This indicates a configuration gap in the material tracking system that prevents waste analysis.

Rejection Analysis - Data Gap

The Rejected table containing quality rejection reasons and quantities is missing from the database context. Consequently, we cannot perform a Pareto analysis or identify the primary root causes of product defects. Establishing a connection to the quality management system (QMS) database is highly recommended to populate this table and enable defect-reduction strategies.

Machine Telemetry Status

All twelve monitored machines (BM-01 through BM-12) in the InfluxDB database returned 'NO DATA' across all historical windows, including the last 24 hours up to the last year. This indicates a severe telemetry ingestion failure, network disconnection, or misconfigured InfluxDB buckets. Real-time machine status, cycle times, and live production tracking are currently offline and require urgent technical review.

Appendix — Data Quality

Table	Records	Completeness	Outliers	Score
attendances	1	100.0%	0	Good
employees	7	100.0%	0	Good
CapacityAnalysis	5	100.0%	0	Good
MachineMaster	25	89.3%	0	Fair
WorkOrder	2	100.0%	0	Good
WorkOrderLog	1	75.0%	0	Needs review
MachineMaterialMapping	8	100.0%	0	Good
Machine	10	90.0%	0	Fair
MachineFGMapping	39	68.6%	0	Needs review

LLM Usage & Cost

Model	Input tokens	Output tokens	Total tokens	Estimated cost
gemini/gemini-3.5-flash	5,250	3,996	9,246	\$0.0438

Aggregation Fallbacks

[mes.Machine] Aggregate query failed (('42000', '[42000] [Microsoft][ODBC Driver 18 for SQL Server][SQL Server]Operand data type nvarchar is invalid for avg operator. (8117) (SQLExecDirectW')) - served raw rows instead.
