

PRODUCTION PERFORMANCE & QUALITY REPORT

Facility: Main Manufacturing Plant Reporting Period: Weekly Summary

Executive Summary:

The manufacturing facility successfully completed 1,000 units of finished goods under Work Order 139, meeting 100% of its planned target. However, other planned work orders, including WO 138 with a planned quantity of 111,111 units and WO 141 with 8,888,888 units, remain incomplete. Capacity analysis shows that Machine 1, Machine 3, and Machine 6 achieved optimal utilization rates of 106.3%, 90.0%, and 100.0% respectively, while Machine 2 and Machine 8 lagged at 75.0% utilization. Across seven recorded weighing machine runs, a total of 9,250 finished goods were processed alongside 225 rejections and 123 units of scrap, with Shift 5 showing the highest defect rate of 16.7%.

1. Weekly Production Trends

Production Analysis:

The production analysis reveals that only Work Order 139 was completed, achieving its target of 1,000 units. Work Order 138 (planned for 111,111 units) and Work Order 141 (planned for 8,888,888 units) remain in Planned and Draft status respectively, with zero completed quantities. Work Order 140 was cancelled. This indicates a massive backlog in planned production that needs immediate scheduling and resource allocation.

Day	Target	Actual	Status
WO 138	111111.0	0.0	Below Target
WO 139	1000.0	1000.0	On Track
WO 140	2.0	0.0	Below Target
WO 141	8888888.0	0.0	Below Target

2. Machine Performance (OEE Breakdown)

OEE Overview:

Capacity analysis indicates strong performance on Machine 1 (106.3% utilization), Machine 3 (90.0% utilization), and Machine 6 (100.0% utilization), all exceeding the optimal threshold of 85%. However, Machine 2 and Machine 8 are underutilized at 75.0% each. This suggests potential bottlenecks or scheduling inefficiencies on these specific lines that require investigation.

Line	OEE Score	Status
Machine 1	106.3%	Optimal
Machine 2	75.0%	Below Target
Machine 3	90.0%	Optimal
Machine 6	100.0%	Optimal
Machine 8	75.0%	Below Target

3. Rejection vs. Production Volume by Shift

Shift Efficiency Analysis:

An analysis of the seven production runs from the weighing machine data shows a total output of 9,250 finished goods. While Shift 1, Shift 3, and Shift 7 maintained low defect rates below 1.2%, Shift 5 experienced a severe quality issue with a 16.7% defect rate (100 rejections out of 600 total units). Additionally, Shift 2 and Shift 4 recorded zero finished goods output but still registered 20 and 15 rejections respectively, indicating major process disruptions.

Shift	Output	Rejections	Defect Rate
Shift 1	4700	50	1.1%
Shift 2	0	20	100.0%
Shift 3	1900	10	0.5%
Shift 4	0	15	100.0%
Shift 5	500	100	16.7%
Shift 6	1450	25	1.7%
Shift 7	700	5	0.7%

4. Scrap Analysis & Waste Distribution

Key Scrap Drivers:

Scrap analysis across seven recorded batches shows a total of 123 units of scrap. The largest contributor to scrap is Scrap Batch 3, accounting for 24.4% (30 units) of the total scrap, followed closely by Scrap Batch 7 at 20.3% (25 units). Together, these two batches represent nearly 45% of all material waste, highlighting them as primary areas for process improvement.

5. Corrective Action Plan

Action Item	Target Area	Owner	Deadline
Investigate high defect rate (16.7%) and 100 rejections during Shift 5 run.	Shift 5 Production Line	Quality Assurance	2023-11-15
Address underutilization (75.0%) on Machine 2 and Machine 8.	Machine Maintenance & Scheduling	Operations	2023-11-18
Review process parameters for Scrap Batch 3 and 7 to reduce material waste.	Scrap Reduction	Process Engineering	2023-11-20
